DEPARTMENT OF LABORATORY MEDICINE - BIOCHEMISTRY

	Test Name	Unit	Reference Range	Low	Normal	High
	C-Reactive Protein [CRP] (Serum, Immunoturbidimetric)	mg/dL	< 0.5			1.07

CRP:

C-reactive protein (CRP) is one of the most sensitive acute-phase reactants for inflammation. CRP elevations are nonspecific and may be useful for the detection of systemic inflammatory processes; to assess treatment of bacterial infections with antibiotics; to detect intrauterine infections with concomitant premature amniorrhexis; to differentiate between active and inactive forms of disease with concurrent infection; to therapeutically monitor rheumatic disease and assess anti-inflammatory therapy; to determine the presence of postoperative complications at an early stage and to distinguish between infection and bone marrow rejection.
