

Name	: Saroj Agarwal	Patient ID	: 0010663186
Date of Birth	: 27-08-1962	Age/Sex	: 63 Years/F
Performing Date	: 23-02-2026 01:33 PM	Order No.	: 0040753675
Referred By	: Shah Darshit	Report Date	: 24-02-2026 11:17 AM
Study Description	: USG Portable Single Organ		

Clinical Profile: Patient is a known operated case of CA uterus with bilateral pleural effusions for which a left sided ICD was placed. Current ultrasound is to evaluate status of pleural fluid and functioning of ICD.

Technique: Portable Ultrasound of chest was performed using low frequency convex transducer.

Right costophrenic space:

Mild right pleural effusion is noted (approximate volume 150-200 cc) with underlying lung showing passive atelectasis with consolidation.

Left costophrenic space:

Mild, septated left pleural effusion is noted (approximate volume 150-200 cc) with underlying lung showing passive atelectasis with consolidation. The previously placed ICD is anterior in location and its tip could not be well appreciated in this scan.

Few lobulated pleural based hypoechogenic foci, largest measuring 3.7 x 2.4 cm are seen along the base of the pleural cavity likely representing metastatic deposits.
