

Name : Saroj Agarwal	Age/Gender : 63 y / F	Collected : 26/02/2026 22:25
Patient ID : 0010663186	Visit Type : IP	Received : 26/02/2026 22:37
Referred By : Dr. Darshit Shah	DOB : 27/08/1962	Reported : 27/02/2026 06:58
Accession : 2600046182	Location : 1T05S`1TR0513`1TB0513`1ONCOMED	

DEPARTMENT OF LABORATORY MEDICINE - BIOCHEMISTRY

	Test Name	Unit	Reference Range	Low	Normal	High
	Blood Gas Analysis-Electrolyt.,Lactate & Glucose					
	Blood Gas Analysis					
	pH (Arterial blood,Ion-selective electrode)		7.35-7.45			7.52
	pCO2 (Arterial blood,Ion-selective electrode)	mmHg	32-45		44.40	
	pO2 (Arterial blood,Ion-selective electrode)	mmHg	83-108	55.90		
	sO2 (Arterial blood,Ion-selective electrode)	% saturation	94-98	90.30		
	HCO3 (Arterial blood,Calculated)	mmol/L	22.2-28.3			36.00
	Sodium	mmol/L	136-145		140.00	
	Potassium	mmol/L	3.4-4.4	3.20		
	Chloride	mmol/L	98-107	97.00		
	Lactate	mmol/L	0.36-0.75			1.30
	Glucose	mg/dL	65-95			126.00

DR. KSHAMA PIMPALGAONKAR
M D Biochemistry
Consultant Biochemist

DR. SRIKANT GHARPURE
M.D, DPB, DCP (London)
Consultant Pathologist

DEPARTMENT OF LABORATORY MEDICINE - BIOCHEMISTRY

Potassium:

- **Potassium:** is the major intracellular cation and is critical to neural and muscle cell activity. Some causes of decreased potassium levels include reduced intake of dietary potassium or excessive loss of potassium from the body due to diarrhea, prolonged vomiting or increased renal excretion. Increased potassium levels may be caused by dehydration or shock, severe burns, diabetic ketoacidosis, and retention of potassium by the kidney.

Blood Gas Analysis:

Blood gases are a group of tests that are performed together to measure the pH, the amount of oxygen and carbon dioxide present in arterial blood in order to evaluate lung function and help detect an acid-base imbalance that could indicate a respiratory, metabolic or kidney disorder.
