**DEPARTMENT OF LABORATORY MEDICINE - HAEMATOLOGY**

**Test performed on Fully Automated Coagulometer.**

**Prothrombin Time (PT):**

- Prothrombin time (PT) is used to evaluate the extrinsic and common pathways of coagulation, which helps detect deficiencies of factors ( II, V, VII, X ) and low fibrinogen concentrations.
- PT/INR is used to monitor oral anticoagulant therapy.
- Prothrombin time maybe prolonged in cases of chronic liver disease, vitamin K deficiency, disseminated intravascular coagulation (DIC) and antiphospholipid antibody syndrome.

**Interference in the assay can be caused by:**

- Preanalytical errors such as hemolyzed, icteric, clotted specimens, improper blood-to-anticoagulant ratio and lipemic samples (decreased prothrombin time).
- Contamination with saline, heparin, or other anticoagulants.
- Polycythemia with a hematocrit greater than 55%.
