| <b>Study Description</b> | : X Ray Portable Chest AP |                    |                       |

The soft tissues and bony thorax are normal.

The cardiac size is within normal limits and the cardiac silhouette is normal.

Patchy consolidation is seen in the right midzone and the right lower zone. Subsegmental atelectasis is seen in the left midzone. Rest of the lungs are clear.

There is no evidence of a pleural effusion.

There is no pneumothorax.

No hilar, diaphragmatic or mediastinal lesion is seen.

Internal jugular line and nasogastric tube are seen in position.
