	Test Name	Unit	Reference Range	Low	Normal	High
	Albumin (Serum, Colorimetric - BCG)	g/dL	3.5-5.2	3.38		
	Globulin (Serum, Calculated)	g/dL	2-3.5		2.25	
	A / G ratio (Serum, Calculated)		1.0-2.5		1.50	

Total Bilirubin:

- Diseases or conditions which, through hemolytic processes, produce bilirubin faster than the liver can metabolize it, cause the levels of unconjugated (indirect) bilirubin to increase in the circulation.
- Liver immaturity and several other diseases in which the bilirubin conjugation mechanism is impaired cause similar elevations of circulating unconjugated bilirubin.
- Bile duct obstruction or damage to hepatocellular structure causes increases in the levels of both conjugated (direct) and unconjugated (indirect) bilirubin in the circulation.
